

# Netlink Automation Integration Services

**Netlink Automation** can integrate your communication, information technology and building systems into one manageable solution.

Anything that can be operated over IT infrastructure we can design, develop and deliver for you. With a convergence of

technology & building systems we deliver a single manageable solution for our clients which is the natural evolution of building automation systems.

**Netlink Automation** provides one Integration Consultant to assess all communications requirements for your project. We can advise where technology implementation and integration can assist, and ensure that the specification and responding Tenderers have appropriate interfaces between building systems defined.

**Netlink Automation** delivers complete technology solutions. We can design and install the infrastructure for communications, information technology, managed services, building automation, control, IPTV, CCTV, duress/nurse call, and integration into security and access control.

## Our Unique Skill Sets

**Netlink Group** is a **Clipsal Platinum Partner**. We have specialist skills in CBUS and Vieo. Both offer critical platforms for intelligent buildings that go beyond traditional building smarts.

We are also a **Cisco Premium Partner**. By integrating communications into the desktop networking environment we open new opportunities for all levels of business.

Our strength comes from experience. We understand the need to enable a building for occupancy and operation and build our solutions to fit with operators' needs.
